01 / THE MISSION

A quieter watch.
A clearer picture.

PROHOR is an offline-capable research workspace for putting astronaut health readings into context.

- Built by Team Skorpe Monad
- A prototype for self-assessment and human review
- Not a medical device

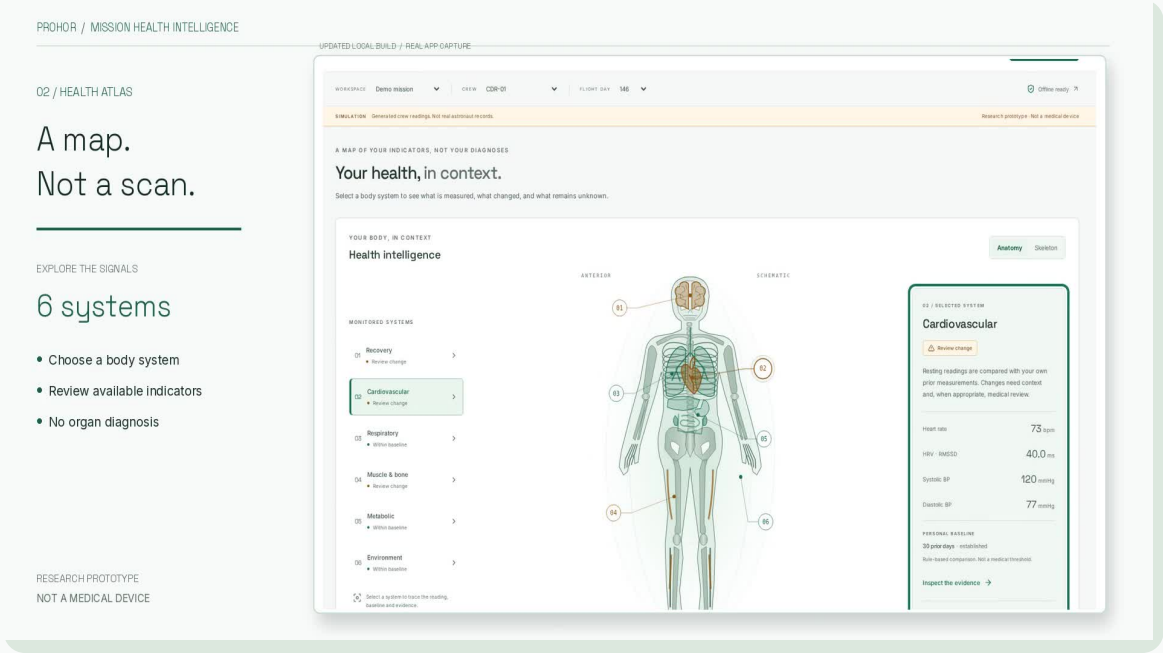

UPDATED LOCAL BUILD / REAL APP CAPTURE

02 / THE CHALLENGE

Distance changes the question.

On long missions, crews need to understand changes in health indicators even when communication is delayed.

- Collect meaningful measurements
- See change against personal history
- Prepare a human-reviewed next step

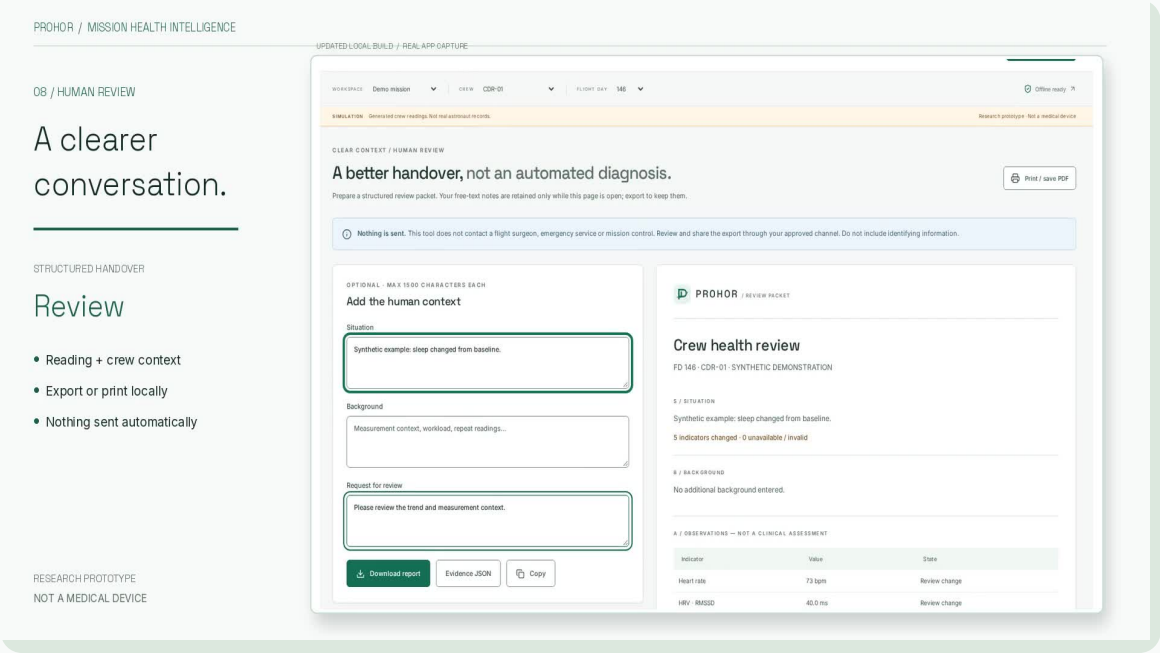

UPDATED LOCAL BUILD / REAL APP CAPTURE

03 / THE WORKFLOW

Observe. Understand. Prepare.

A simple flow connects a recorded reading to an explainable trend, a routine prompt and a handover.

- Log a reading or import a local CSV
- Inspect a trend and its rule
- Export context for review; not a diagnosis

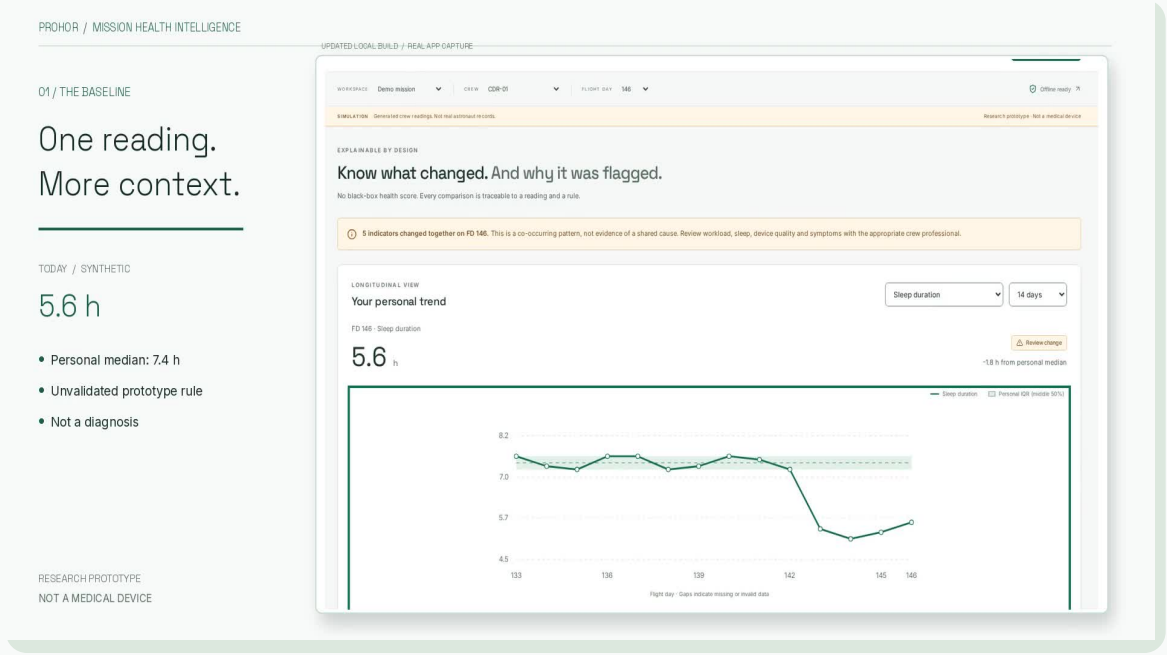

UPDATED LOCAL BUILD / REAL APP CAPTURE

04 / A SYNTHETIC EXAMPLE

One reading. More context.

In the demo, sleep is 5.6 hours against a 7.4-hour personal median. This is simulated, not astronaut telemetry.

- Compare to prior personal observations
- An unvalidated prototype heuristic
- A flag prompts review; it is not a diagnosis

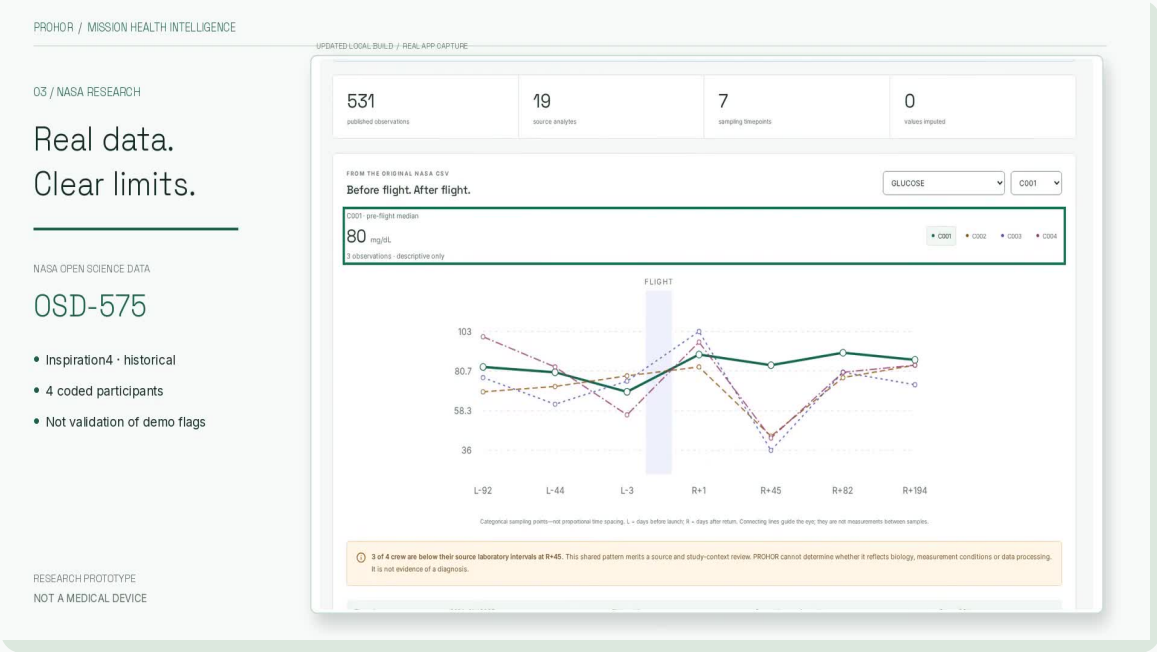

UPDATED LOCAL BUILD / REAL APP CAPTURE

05 / NASA OPEN DATA

Real research. Clear limits.

A separate explorer presents historical Inspiration4 blood-serum measurements from NASA OSD-575.

- Source-linked measurements and study context
- Four coded participants; historical data
- Not live telemetry or validation of the demo rule

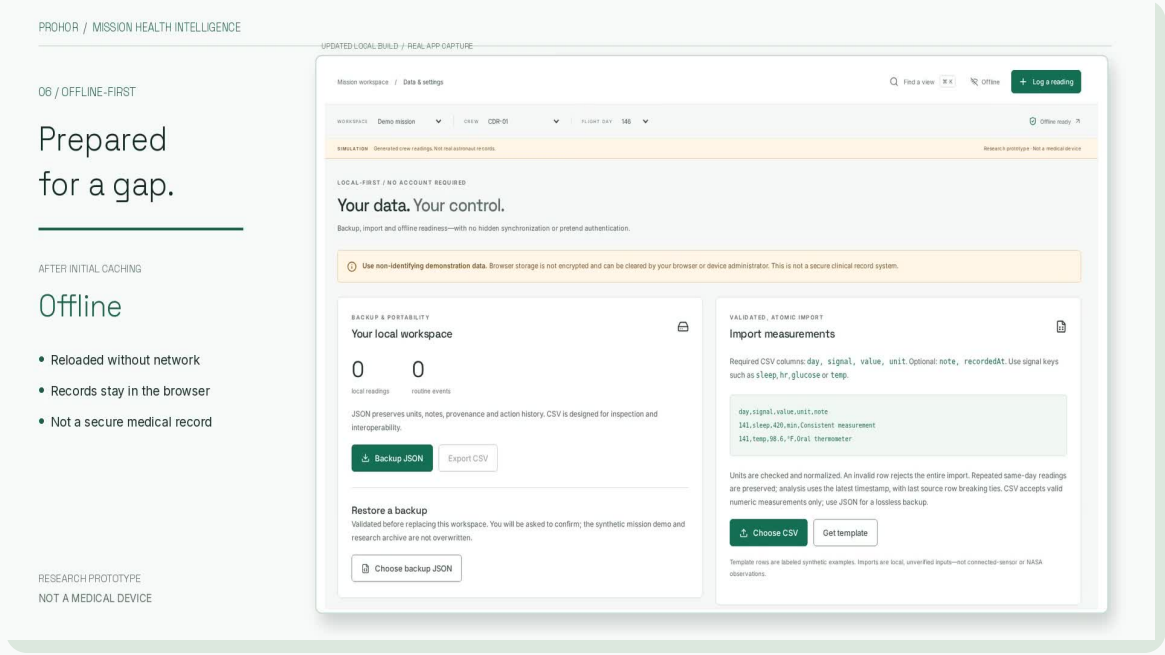

UPDATED LOCAL BUILD / REAL APP CAPTURE

06 / OFFLINE & PORTABILITY

Prepared for a gap.

After initial caching, the workspace can reload without a network. Local records remain in the browser.

- CSV import checks required fields and units
- Back up or export locally
- No hidden sync; browser storage is not encrypted

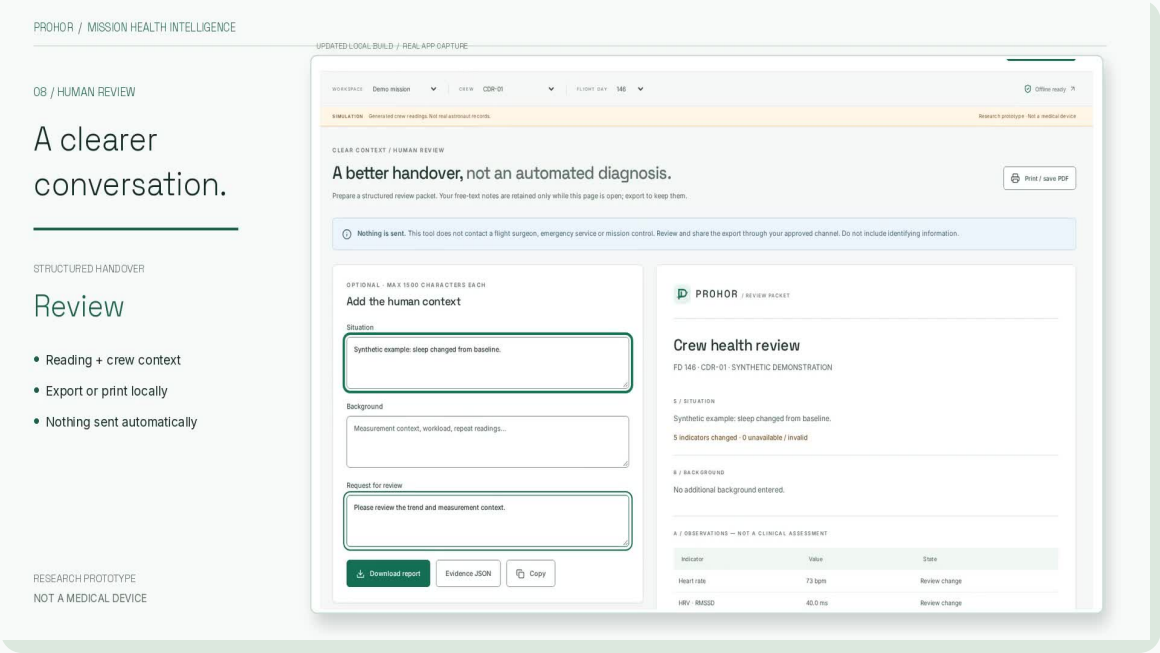

UPDATED LOCAL BUILD / REAL APP CAPTURE

07 / RESPONSIBLE NEXT STEPS

Human first. Always.

PROHOR is a research prototype, not NASA-endorsed, a medical device or a clinical decision system.

- Validate with domain experts before real use
- Protect sensitive data and follow procedures
- Explore source, methods and judges’ dossiers
